Services Provided

Workplace design strategy; Full service interior design and architecture; Sustainable design and consulting; Furniture standards; Environmental graphic design - branding and signage

Invernergy develops, owns, and operates large-scale renewable and other clean energy generation facilities across North America and Europe. IA was selected to design its headquarters to match the company's progressive, technology driven culture and to provide flexibility for growth.

The new design is reflective of Invernergy's brand. Bold graphics representing the company's history and industry imagery are incorporated throughout. Workstation panel heights are low to encourage collaboration and communication amongst employees, while private offices are away from the perimeter to provide access to natural light for all. Huddle rooms and private offices are the same size and collaboration areas and file banks can be replaced with workstations or redistributed to accommodate for future growth. Collaboration corridors link the open office and meeting rooms, offering jump spaces to touch down before meetings or break away from the open office to work for the day.

Ultimately, the design is flexible and energized, accommodating to various work styles and supportive of the needs of current and future employees.
