### Services Provided

Full service interior design and architecture; Standards development; Workplace strategy; Sustainable design and consulting; Environmental graphic design

---

LinkedIn's primary goal is to create work environments that reinforce its brand and engage employees and visitors alike. Within the constraints of rapid schedules, IA design teams create spaces that are professional, organized, and uniquely branded. Surveys and visioning sessions are conducted with staff to provide data-driven planning and design concepts. The resulting themes allow for functional work spaces reflective of each location's specific culture and employee needs.

A variety of work settings provide choices for individual or group activities, such as quiet concentration spaces, small informal meeting areas, group huddle rooms, project rooms, lounge areas, and desk work areas. Employees can work according to an activity, not limiting their workspace to a single setting. Amenities such as fitness centers, screening rooms, dining areas, etc. are also available for socializing and respite.
