Services Provided

Workplace design strategies; Full service interior design and architecture; Environmental graphic design; Sustainable design and consulting

Bright, adaptable, thoughtfully branded and technologically adept describe McKesson's wellness-inspired Medical-Surgical Headquarters located in suburban Richmond, VA. Relocating from an overcrowded and inflexible workplace, the design team transformed three floors of a second-generation, multi-tenant office building into an innovative head office for their Medical-Surgical division, a leader in providing medical-surgical supplies and equipment to the healthcare industry.

Focused on designing for new ways of working, the workplace strategy and design team created a workplace that offers over 15 types of alternative work settings, allowing for greater mobility and adaptability to varied work styles. The team worked closely with vendors to integrate product solutions that improve health and wellness, such as LED lighting and height-adjustable desks; incorporating healthy food stations; a variety of activity areas; and Wi-Fi technology throughout to encourage employee movement and engagement.

The project scope included corporate workspace, with flexible and open 6x6 workstations and glass-front private offices, a hospitality/conferencing center adjacent to the building lobby, a variety of conference rooms, a large, tiered training room, a product showroom showcasing McKesson's products and

services, multiple interactive lounges and community break spaces on each floor, an IT store, and an executive space with executive offices and boardroom.

The scope was guided by the office wellness initiatives, wireless connectivity, office hoteling areas, areas with sit/stand desking and pursuit of LEED certification. In conjunction, the design team worked with McKesson's showroom consultant to coordinate and document the showroom component seamlessly into the overall project design.

Top design features include circular wood veneer decorative lighting and associated ceiling coves, reclaimed lumber accent walls, hexagonal carpet tiles, bright colors that tie back to the McKesson brand, and a mixture of eclectic furnishings. Daylighting and views were a top priority for the McKesson employees and the lush suburban office location enhances the concept.
